

Bus Stop Announcement System

The product

Bus Stop Announcer

Stop Information/Advertisement LED Display

What is Announcer

- **The System is developed on android platform with a Google map based bus stop points marking and route creation.**
- **The system will announce the next stop and the Arriving stop and send the same text message to an LED display**
- **Commercial Advertisement for the respective stop or place can be announced when bus reach to that point.**
- **Any custom welcome messages or broadcasting in voice and on LED display.**

LED Display for the Stop Information Display

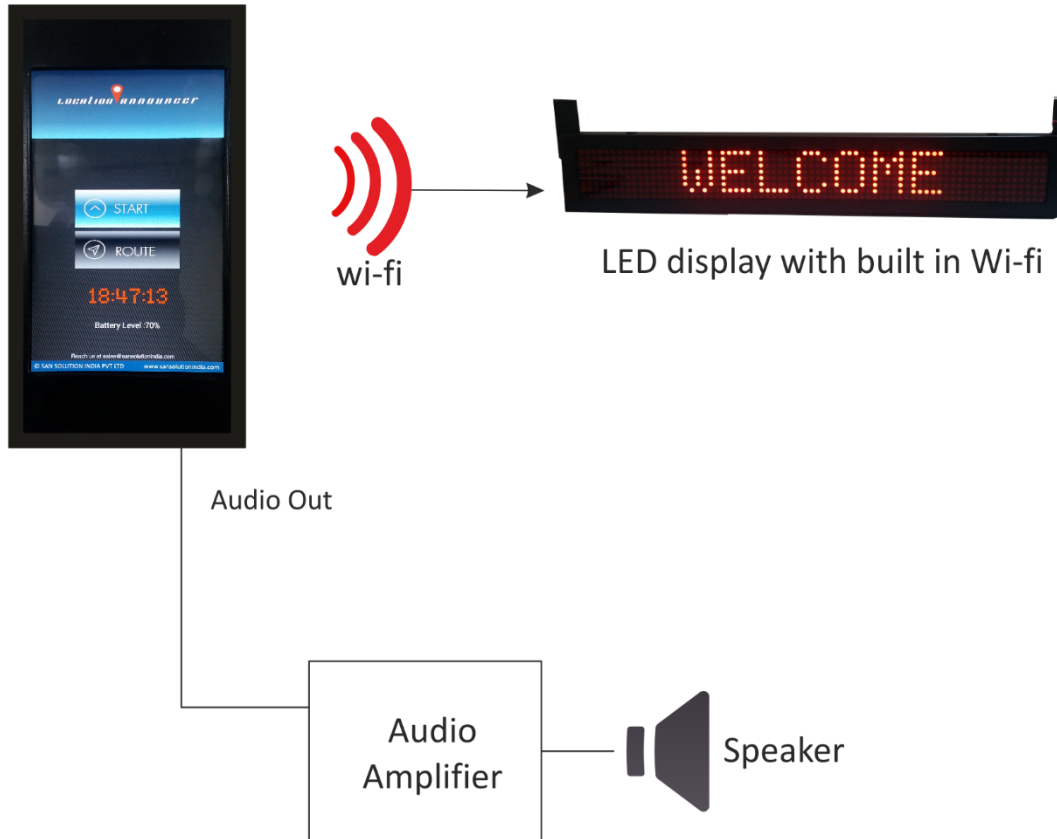

- It is 8X8 dot matrix LED display with 9 segments with built in Wi-Fi module.
- LED display board to Announcer will be connected through the built in Wi-Fi device to show the stop information in English and Regional Language.
- Commercial Advertisement for the various stops based on the location or stop can be displayed

Advantage

- **The passenger be alerted by a voice message in English and regional language for their stop to alight from the bus before they reach to the stop**
- **The displays shows the stop details in English and Regional Language**
- **Bus operators will get Revenue from the Advertisements.**

Functional Diagram

Announcer

Announcer Management Software

- **This software creates the entire stop details for the bus route on Google map with stop information , Announcement Audio and Advertisement details.**
- **The created details will be transmitted to the Announcer device over an internet connected Wi-Fi network .**
- **Very easy to handle the software which is based on the Google map.**
- **Regional language keyboards for any language can be created.**

Data Management

Data Transfer between PC to the Announcer
