

Bus Stop Announcement System

LOCATION ANNOUNCER

What is Location Announcer

- **Location announcer is a based on GPS coordinate location for announcing the Stop information in English and the Regional language in the Public transport .**
- **This solution is deigned with an hardware device and the Web application Software to manage the Route with stop assignment to the device, managing advertisement assign and various MIS reports.**
- **As an option we can connect a LED display board to this device to show the stop information in English and in Regional Language.**

Advantage

- The passengers will be alerted by a voice message in English and regional language for their stop to alight from the bus before they reach to the stop
- The displays shows the stop details so that passenger can plan get ready to alight.
- Passenger doesn't have to enquire with any person in the bus for the stop where they need to alight.
- The displays shows the stop details with "NEXT STOP " and "ARRIVING STOP" in English and in the Regional Language
- Last minute rush to Alight from the bus is avoided
- **The Solution owner can get Revenue from advertisement playing in the bus**

Functional Diagram

Announcer Management Software

- **User can create the multiple Route details with the Stop information**
- **The created route details will be transmitted to the Announcer device over a GSM Network**
- **The advertisement data assigned to the device will be transmitted online.**
- **Various option to manage the Route assign, Advertisement assign and MIS reports**
